

Dr. REBUILD's Pollution Glossary

EGR = Exhaust Gas Recirculation

Pollution control equipment that recirculates exhaust gases that contain unburned gasoline.

EFE = Early Fuel Evaporation

Pollution control equipment that recirculates RH side exhaust manifold gases to reduce gas emissions & reduce engine warm up time.

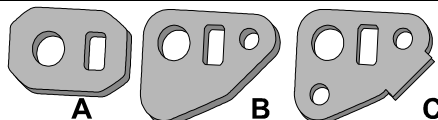

TVS = Thermal Vacuum Switch

A temperature sensitive pollution control switch that controls the vacuum supply by opening or closing at a specific temperature

AIR = Air Injector Reactor

Pollution control equipment that injects cool air towards the exhaust valves to aid combustion of unburned fuel. Also called the smog pump.
