### NEW... "Guaranteed Bolt In" Aluminum Radiators

No Cutting, No Bending and No Fussing these "bolt in" just like factory without any modification and use stock radiator hoses, fan shrouds and supports.

They look just like stock Copper Brass radiators however they cool better than any one made of Copper Brass. They are an economical sensible alternative for any Corvette than runs hot. Combined with our radiator seals they are truly a winning combination. UPS O/S

## These Aluminum radiators are a direct replacement for the OE numbered Radiators listed below.

We Don't make our repro's from bogus copied Repro's

Blem Products boasts that they "Did years of Research developing these parts and collected authentic samples". They appeal for your confidence when considering these parts. *Consider this...* 

Knowing that they merely copy another repro part to "develop" theirs, we provided them with phony bologna parts that were never installed on a Corvette. We invented them for these "researchers" and they even copied them too and didn't know it.

#### Now 15 years later....

They still have hoses with the wrong ID and OD and rubber seals that just don't fit the radiator – because they were never used. I invented them for Zip to copy. They would copy any feature, any detail without any thought as to whether it's was present in a real part. They just blindly copy it.
