Stainless Steel MYTHS Debunked

Do Stainless Exhaust Systems "Grow 1 1/2 inches"?

All metals will expand when heated. The rate at which a metal expands is expressed as its Coefficient of Expansion. The rate for Steel is .00000633 per inch; the rate for Stainless is .00000920 per inch. *What does this mean?* It means the average exhaust system with 16 feet of stainless pipe will GROW 3/32 of an inch more than a Steel pipe. In order for the exhaust to grow 1 1/2 inches, it would need to be more than 100 feet long. Ever hear of Pinocchio?

Do Stainless Exhaust Systems "Discolor"?

As any motorcycle owner can tell you - Yes a Stainless exhaust pipe will initially turn pale blue near the manifold. However, a conventional Steel or Aluminized exhaust pipe will also discolor very badly. They turn a darkened RED color - and you know what it's called - CRUMBLING RUST.

Do Stainless Exhaust Systems "Get Hotter"?

Hogwash! A Stainless exhaust pipe WILL NOT get any hotter or radiate any more heat than a conventional Steel or Aluminized exhaust pipe. Pinocchio?

Do Stainless Exhaust Systems "Bend Differently"?

What Nonsense! Professionally fabricated pipe WILL NOT bend any differently. New Corvettes, Cadillacs & Ferraris have stainless pipes from the factory. Maybe America's Leader in Corvette Nonsense can't bend pipes like them.

Do Stainless Exhaust Systems "Cost More"?

True, stainless does initially cost more, but they DO NOT RUST OUT so you do not have to replace them over and over like a conventional exhaust system.

? Exhaust Shipping Information

All exhaust systems are Oversize and are not charged the standard shipping rates as listed on the order form and in this catalog. They are instead only charged the oversize rate which varies from \$30-50 depending upon the destination. 63-72 WELDED systems require two shipping cartons and their oversize rate varies from \$45-75 depending upon the destination.
