How to Tell Early 71 from Late 71 Lamps

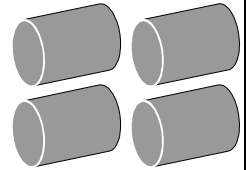

NOTE The center of Early 71 lenses is conical *i.e.* domed with a peak in the center. The Late 71 lens has spherical center *i.e.* gently rounded with a smooth dome in the center. According to Assembly Manuals Early 71 is prior to August 20, 1970; Late is after. Early 71 has a Fiberoptic port in the rear housing. Late 71 does not.

- 58-79 Stop Lamp Switch**
 excellent plastic replacement 2447104 14.00
- 58-79 Switch Adjustment Nuts
 Pair. **Does 1 car.** 2447105 2.95

58-73 Felt Lens Wicks

Mounts in a notch at the lower edge of the lens so that moisture evaporates Prevents rust out from condensation build up.

4 Piece set. Does 1 car.
